

Skills

- **Data Analytics:**
SQL (SQL Server, MySQL) | Python (Pandas, NumPy, SciPy, Matplotlib) | Excel | Data Cleaning | EDA | Data Modeling
- **Business Intelligence:**
Power BI | Tableau | Dashboard Development | Reporting | Data Visualization
- **Machine Learning:**
Scikit-learn | Regression | Predictive Modeling | Feature Engineering
- **Software Development:**
C# | .NET | Entity Framework Core | REST APIs | Angular | TypeScript | JavaScript | HTML | CSS
- **Other:**
Git | Documentation

Projects(most recent)

[Customer Shopping Behavior Analysis](#) — Personal Project | July 2026

- Analyzed **3,900 customer transactions** using **Python, Pandas, PostgreSQL, and Power BI** to identify purchasing patterns, customer segments, revenue drivers, and engagement opportunities.
- Applied **SQL, CTEs, Window Functions, segmentation, and revenue analysis** to clean and analyze the data and answer **10 business questions**.
- Developed an **interactive Power BI dashboard** and translated findings into recommendations for **subscription adoption, customer loyalty, discount strategies, product promotion, and targeted marketing**.

[Machine Learning Salary Prediction](#) — Personal Project | May 2026

- Developed an **end-to-end salary prediction pipeline** using **Python, Pandas, NumPy, and Scikit-learn**, covering data preparation, exploratory analysis, feature engineering, model training, and evaluation.
- Performed **data preprocessing and EDA**, including missing-value handling, categorical encoding, and feature preparation to improve model readiness and predictive performance.
- Trained and compared **regression models** using **RMSE, MAE, and R²** to evaluate model performance and identify the most effective approach for salary prediction.

[British Airways Customer Review Dashboard](#) — Personal Project | April 2026

- Analyzed **1,000+ British Airways customer reviews** using **Tableau** to evaluate satisfaction across cabin staff, food, entertainment, seat comfort, and other service categories.
- Used **SQL, CTEs, and Window Functions** to clean, transform, and prepare review data for analysis, ensuring consistency and data quality.
- Built an **interactive Tableau dashboard** using filters, parameters, calculated fields, KPIs, and time-series visualizations to explore customer ratings by **aircraft type, traveller category, geographic region, and route**.
- Identified **customer satisfaction trends and performance patterns** to provide a clearer view of factors influencing the overall travel experience.

Seattle Airbnb Pricing & Revenue Analysis — Personal Project | February 2026

- Cleaned and prepared a **Seattle Airbnb dataset from Kaggle** using **Microsoft Excel**, applying data-quality checks and preparing the data for visualization and analysis.
- Developed an **interactive Tableau dashboard** to analyze Airbnb pricing and revenue trends, including **average price per bedroom and weekly/yearly revenue patterns**.
- Created **geospatial maps and comparative visualizations** to identify pricing patterns across Seattle ZIP codes and support **location-based pricing analysis**.

Work Experience

Re-Pipeline Performance Reporting Analysis – Ammani Kenzam — Junior Data Analyst | November 2024 – Present

- Developed and automated **asphalt plant performance reports** using **Excel and operational data** to monitor production efficiency and identify process bottlenecks.
- Analyzed **production throughput, material flow, and operational downtime** to improve reporting accuracy and support data-driven operational decisions.
- Designed structured **reporting workflows and dashboards** to streamline performance tracking, improve operational visibility, and support daily plant efficiency.

Chronodesk Improvements – Rysis Software — Intern Software Developer | June 2023 – June 2024

- Developed a key **CRM feature** that improved customer management efficiency by **40%** for tracking and managing client interactions.
- Collaborated with senior developers to deliver a **new application version on schedule**, contributing reliable, low-bug code.
- Integrated new functionality and performed **testing and debugging** to improve platform reliability and performance.

Education

Bachelor of Science in Information Technology — North-West University | Dec 2022

Certifications

- **Advanced SQL for Data Engineering** — Udemy
- **Data Analytics Bootcamp** — AlexTheAnalyst
- **Git** — IBM
- **API** — IBM
- **Agile Introduction** — IBM
